

Satellite radio is a new and valuable service in the radio market. Because I have to buy special equipment and subscribe to it (unlike regular broadcasting) I should be able to get any service I want. This isn't a public service but a private pay as you go service. Please do not succumb to political pressure by its competitors who are afraid of losing their stranglehold on the market. As a voter I will be very dissatisfied if satellite radio programming is limited by the FCC.
